

COVID-19 Vaccine Information

What is a vaccine?

A **shot** that gives your body medicine. It helps your body fight illnesses that can make you sick, like COVID-19. Getting the vaccine is the best way to protect yourself and others from getting the virus that causes COVID-19. A doctor or nurse, also called a healthcare professional will give you your vaccine.

Is it safe for me?

It's generally safe for most people but it's very important to talk with your doctor before getting the vaccine to make sure it's safe for you. Getting the vaccine will not give you COVID-19. The vaccine is the best way to protect yourself and others from getting sick.

Is there more than one kind of vaccine?

Two vaccines are approved for the United States. One is from a company called Moderna and the other is from a company called Pfizer/BioNTech.

How much does it cost?

It will be free for most people but there may be a fee for giving the shot. Check with your healthcare professional to see if you have to pay a fee.

If I've already had COVID-19, do I still need a vaccine?

Yes. You can get COVID-19 again even if you've already had it. The vaccine is the best way to protect yourself and others from getting it again.

How many shots do I need?

Most people need **two (2)** shots about **three (3) weeks apart**. Without the second shot your body won't be able to fight the virus as well as it should. The person giving you your shot will tell you when to get your second one. Both shots need to be the same vaccine.

When will I get one?

Companies are working hard to make enough vaccines for everyone. The Government and the State of Nevada created a plan for who gets the vaccine and when. You can see the plan at immunizenevada.org. People who are more likely to get sick from COVID-19 will get the vaccine first. The goal is for everybody to get a vaccine by this summer. Healthcare professionals will let you know when it's your turn to get the vaccine.

What happens when I get my first shot?

Wear your mask! The person giving you your shot will watch you for 15 minutes to make sure you're ok. You will get a card telling you what vaccine you had, where you had it and when to get your next one. You should also get information for **v-safe**, a free smart phone tool to check-in on you after you get the vaccine and remind you to get your second shot. You do not have to enroll in the **v-safe** program.

How will I feel after the shot?

Your arm may be sore, you might get a headache, fever, sore muscles or be tired for a couple days. These are called side effects. They are normal and mean that your body is working to build up protection to the virus. Get the second shot even if you have side effects after the first one, unless a vaccination provider or your doctor tells you not to.

How long will it take to work?

It usually takes a few weeks to build up protection, or immunity. You can still get sick or make someone else sick during that time so it's important to wear your mask, wash your hands and stay at least 6 feet away from others until doctors tell you not to.

What happens if I miss my second shot?

You can still get your second shot. Contact the place that gave you your first shot right away and they can help get you scheduled for your second shot.

Talk to your healthcare professional to get all the information you need to make the best decision for you!

Some questions to ask your doctor about the vaccine:

- Is it safe for me?
- When will I get it?
- Where do I go to get it?
- How will I feel after?
